

Sonar chooses Insight for Azure Optimisation and Governance

Story Snapshot

The industry-leading solution of Sonar enables developers and development teams to write clean code and remediate existing code organically so that they can focus on the work they love and maximize the value they generate for businesses.

The leader in clean code, Sonar is committed to its core values of transparency and continuous improvement to support our community and make tomorrow's innovations possible.

- continuous innovation
- continuous feedback
- continuous enhancements

Background

Sonar is an industry-leading solution trusted by more than 400,000 organizations and 7+ million developers worldwide that consider it integral to delivering better software.

SonarSource chose Insight due to their dedication to surpass expectations and pursue excellence. Moreover, SonarSource identified Insight as a reliable and industry-leading Cloud Partner throughout the market screening step.

Challenge

Sonar already had an Azure environment and was looking for the right partner to optimise it, especially in terms of security and processes.

The customer also wanted to use Azure best practices to implement security policies and processes in an optimal way.

Another challenge was lifecycle management for policies and processes as well as regular audits.

“During the workshop, Insight demonstrated their level of expertise by presenting a Cloud Journey plan that was polished, well-structured, and well-organized. Because of this professional attitude, we were able to surpass our expectations and successfully develop an idea based on Microsoft Azure.”

Andrea Malagodi, Executive Board Member and CIO
SonarSource SA

"The complexity of cloud systems is constantly on the rise. Insight, with their cutting-edge experience, displayed everything that was necessary for us to get started on our Cloud Journey. We value the partnership with Insight." Andrea Malagodi, Executive Board Member and CIO

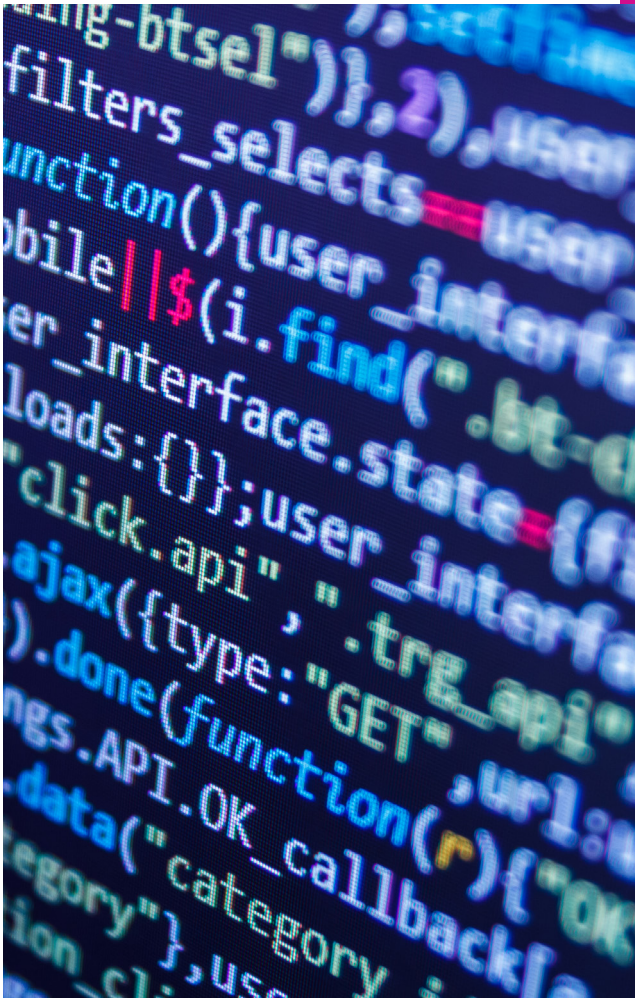

Solution and Outcome

SonarSource has engaged with Insight to provide consultancy services to deliver a technical workshop to review their Azure environment and introduce Azure fundamentals and governance options for defining internal security guidelines and processes to follow Azure governance best practices.

SonarSource asked Insight for Azure options to implement security policies and processes on their existing CI/CD workflow. Additionally, SonarSource requested guidance on Azure best practices to ensure their environment was secure and well-managed. To avoid drift, SonarSource will perform regular audits to review governance on a regular basis.

During the workshop, Insight provided SonarSource with the core knowledge required for a successful start to their cloud journey. Experts from Insight have supplied the client with all the necessary information regarding Azure Foundation Concepts and Optimizations Considerations.

Furthermore, with reference to the anticipated Cloud Design of SonarSource – Insight guided the customer into the Azure Cloud environment with examples directly from the industry. In addition Insight managed to define and implement an Azure Landing Zone together with SonarSource.

Why Insight?

Insight's Azure assessment and deployment services have been developed in line with Microsoft's Cloud Adoption Framework (CAF) for Azure. The workshops are designed to provide best practice recommendations for SonarSource's overall Azure strategy.

Using proven methodologies, Insight's experts will hold technical workshops and work with key stakeholders to complete the plan and build phases for the project, which will be tailored to meet SonarSource's requirements.

RESULTS IN NUMBERS

20 %

time savings compared to before

100 %

prepared for audits due to policy implementation
